

The Devil's Element - Fluoride

A Dentist in the UK had IBS. An alternative Practitioner told him to stop using any product with fluoride in it. He did, and his IBS disappeared. This worried him since he had been recommending fluoride for some 20 years to his patients to protect their teeth. He confessed that the degree of mottling of teeth in his area was extremely high...water had fluoride added to it. This is what fluoride does to teeth.

Fluorides are the dangerous by-products of the brick and aluminium smelting industry. Formerly, these producers had to pay large sums to have the toxic waste disposed of. In 1952 the emissions from these plants created a sizeable portion of the London smog that killed 4000 people. This was hydrogen fluoride. The Clean Air Act forbade the emission into the atmosphere and so the chimneys had to be scrubbed, the scrubbing produces **hexafluorosilicic acid...this is added to drinking water. So they are now being paid to have their noxious by product taken away.**

Fluorides are used in rat poison, pesticides, nerve gas, and **PROZAC**, a mind altering drug. The Nazis at Auschwitz were experimenting with the substance as a means to mind control the prisoners.

Wherever fluoride is introduced into the water supply without the population's consent constitutes "Compulsory Mass Medication". Unless you know about it and consume bottled water which in many cases is more expensive than petrol.

AND the Water Company's demand an indemnity from the government against the risks of being held responsible for poisoning their customers and employees. So far governments will not give this guarantee. Why? Food grown with pesticides contains fluoride. Fluoride helps take aluminium into the brain...guess what, aluminium sulphate is also added to the drinking water...the link with Alzheimers looks very likely.

Areas like Birmingham have 34% of their children with disfigured teeth. Professor O. Mullane, Journal of Dental Research 1990 claimed that 50% of children in the Republic of Ireland were affected.

Now why are Dentists so keen to proclaim the benefits of fluoride? In the UK the only Union is the British Dental Association. Their claims for the benefits for fluoride seem on the face of it to be tantamount to putting their members out of business. Altruism? Round Objects!!! The union was and is receiving cash from toothpaste manufacturers. They, the union, agree for their logo to be used on the packaging as a form of accreditation....fees, fees, fees.

For more information refer to the book Menace in the Mouth featured in the document 'Toxic Teeth'.
